Introduction

Universities around the world are directly involved in creating knowledge. These can take form of prototypes, articles and innovative ideas. These are also outputs of knowledge dissemination taking place in the university in form of lecture classes, laboratory experiments and project/thesis works. But ideas should not only be created but also protected and implemented. Awareness of Intellectual Property (IP) Rights sensitizes us towards this fact.

Students and knowledge workers of the developing world had to grapple with limited study materials. But due to Information and Communication Technology (ICT), researchers and knowledge seekers of the developing world are no longer restricted by limitations of educational resources. Thanks to internet, geographical hindrances and long distances have become insignificant in the process of knowledge creation.

Methodology

Six speakers will explain in detail about different important aspects related to securing Intellectual Property Rights in Nepal. Implementation plan for securing Intellectual Property for the developed prototype, computer program, computer software and book will be explained in detail. A speaker will also orient on search of information in open access Patent Databases. Various legal aspects related to IP rights in Nepal will also be discussed.

Focus Group

This program is targets faculty members, research assistants, research associates, graduates, undergraduates and administrative staff.

Outcome

The participants of this two days seminar we will be sensitized on the following:

1. Importance of Creation, Protection and Commercialization of an idea
2. Important facts related to Intellectual Property Rights
